Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1 and 9 both recite "the atmospheric temperature" there is no antecedent basis for this recitation in the claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1, 2, 4-6 and 9-11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gruhbaum (U.S. Pat. 6,938,459). Gruhbaum shows a temperature value at the present time and a speed value of an asynchronous motor 15 driving a gas supplying and a circulating means 11 are compared with at least one characteristic line stored in a computer, and the present humidity in the mixed gas is calculated from a deviation Δ of measured speed from the speed of the stored characteristic line. This invention includes a device 1

processing and preparing food, executing especially a method of calculating the humidity in the gas mixture.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 7 rejected under 35 U.S.C. 103(a) as being unpatentable over Grubbaum in view of JP 2003050015. Grubbaum does not explicitly show a partition between a fan and a chamber or an exhaust port. JP2003050015 discloses a cooking apparatus that shows oven chamber 100a, a food placement table 4, a vaporization pan 16, a heating heater 1, a fan 2, a water supplier 3, a wall temperature sensor 14, an exhaust port 5, and a control section for controlling the operations of the heating heater 1, the fan 2, and the water supplier 3. The control section forces the heating heater 1 to produce heat and the fan 2 to be rotated, and when temperature detected by the wall temperature sensor 14 exceeds a predetermined temperature, the fan 2 to be interrupted in its rotation, a predetermined amount of water to be supplied from the water supplier 3 to the vaporization pan 16, and water supplied to the vaporization pan 16 to be vaporized as superheated vapor, and further air to be

exhausted from the exhaust port 5 of the oven chamber 100a for filling the inside of the oven chamber 100a with the superheated vapor. It would have been obvious to separate the fan from the chamber so as to provide protection for the fan from dirt and heat and the port is used to exhaust excess heat.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hillman, Dombush and Gagas are cited to show structure similar to the claimed invention.
